German elections: Kitchen table polling stations are open

Polls are in flux. The SPD – pulled up by popular frontrunner FM Scholz – has exploited the conservatives’ ongoing weakness and turned a seemingly hopeless endeavour into a neck-and-neck race. In parallel, the Greens are stumbling. In the midst of this volatile political atmosphere, postal voting has started. As most postal voters intend to cast their vote quickly, there is little time left for the faltering conservatives and Greens to regain voters’ support.

Moreover, a veritable postal vote boom is expected for this year’s federal election. While postal voting has already become increasingly popular (in 2017 29% of voters used that option), the pandemic has made it a safe alternative for voters. Recent regional elections have seen the postal voting share double, a trend that could also emerge on a federal level. Still, the German voting system (and postal services) appears to be well prepared for an increase in postal voting.

Election campaigns in full swing as voters start to cast postal ballots. In fact, the German federal election has already begun with postal votes being cast now every day until the elections day on September 26. This changes campaign dynamics to a certain extent. Rather than just focusing on the final days, parties have already intensified their campaigns in an attempt to mobilize for postal voting. However, the increasingly popular postal vote is a double-edged sword. On the one hand, every postal vote won is secured no matter what happens up to the elections. For example, when just days before regional elections in March, allegations emerged of some CDU MPs being involved in questionable mask procurement deals, postal votes already cast may have saved the CDU from an even bigger defeat in Baden-Wurttemberg and Rhineland-Palatinate. On the other hand, every postal vote lost to another party cannot be won back. Especially, the faltering conservatives and the Greens with their stumbling chancellor candidates have little time left to convince (postal) voters that they are the right choice after all (see Figures 1 and 2).

Meanwhile, the upswing seems to have come just in time for the SPD. Their increasingly popular chancellor candidate, FM Scholz, is smiling at voters from billboards with a postal ballot in his hand. Though 60% of postal voters intend to return the postal ballot as soon as they receive it (University of Hohenheim and Forsa¹), some might wait for the candidates’ TV debates to make their decision (see Figure 3).

---

¹ University of Hohenheim and Forsa, Bundestagswahl 2021: Wahlkampf, Stimmung, Meinungen, August 2021
Boom in postal vote expected

Pandemic amplifies the upward trend in postal voting. In Germany, voting at the ballot box is the standard, while postal voting, though open to all voters, is only possible on request (since 2009 without justification). Nevertheless, postal voting has become more popular and more widely used over the last two decades (see Figure 4). Especially the convenience of filling out the ballot at any time and at home makes postal voting attractive in an increasingly mobile society. The pandemic has made postal voting even more attractive, especially for voters concerned about their health or not keen to abide by strict sanitary rules at the polling stations. For example, in the regional elections held in March during the build-up of the 3rd pandemic wave, the share of postal votes doubled in Baden-Wuerttemberg (51.3% vs 21% in 2016) and Rhineland-Palatinate (65.9% vs 30.6% in 2016). A similar increase was also seen in the June election in Saxony-Anhalt, though at a lower level (29.1% vs. 15.9% in 2016), as postal voting is generally less prevalent in Eastern Germany.

The Federal Returning Officer is expecting a similar development for the upcoming federal elections (Spiegel, August 16). This does not seem far-fetched, given that in a recent poll 39% of voters stated their intention to opt for postal vote (41% ballot box vote, 19% not yet decided; University of Hohenheim and Forsa). In view of the pandemic, it is not surprising that especially voters aged 60+ seem to prefer postal voting (46% in this group say that they will cast a postal vote, while it is 31–34% in younger age groups).

Increased share of postal voters makes the projection of the election result via exit polls more demanding. First projections (so-called Hochrechnungen) of the election results are published on TV after the closing of the polling stations at 6pm. They are mainly based on exit polls, i.e. interviews with voters after they have left the polling station (the process to arrive at these projections is a bit more complex, though). Exit polls do not cover postal voters. However, given their number and slightly different voting patterns, they are relevant for assessing the election result. Their votes are counted simultaneously with the ballot box votes. More reliable are thus the polling forecasts (based on votes counted) presented in the course of the evening. In the event of a close result, the provisional result, expected to be published later at night or in the morning, will provide clarity on the distribution of seats and, by that, majorities in the Bundestag.

Who are the postal voters and what is their impact on the election? Postal voters not that different from in-person voters. It appears that voters make different use of postal voting as their profile differs slightly from ballot box voters (see Figure 5). For example, the CDU/CSU had 4.9pp higher share in postal votes than in ballot box votes in the 2017 federal elections, while for the AfD it was 4.3pp lower. These differences can mainly be explained by postal voters being older voters with higher incomes, typically pensioners, self-employed but also students, mostly
living in urban areas and in Western Germany. It is rather surprising, but also encouraging in view of the hurdle the application requirement could pose to some voters, that education seems to have no clear influence on the propensity to vote by post. More importantly, postal voters are not only core voters with strong party ties. Also frequent non-voters opt for postal voting. In the 2017 federal elections, they accounted for about 25% of postal voters, a noteworthy proportion. For Germany, there is no evidence that postal voters have clearly different attitudes or political preferences than ballot box voters.

**Bottom line.** Postal voters and ballot box voters do not differ fundamentally in the way they make their voting decision. Against the background of dwindling party affiliations, both groups give increasing weight to short-term drivers like the election campaign and the image of the candidates when making their vote (see our analysis on tipping the scale in a tight election). This is reflected in the increasingly volatile polls where currently the SPD pulled up by their popular frontrunner Scholz seems to have gained momentum just in time for the election. Still, as polls are not set in stone, the only fair conclusion on today’s perspective seems to be that a three-way party coalition will be needed to achieve a majority in the Bundestag, with a CDU-led Jamaica or a SPD-led traffic-light coalition the most likely scenarios.

We thank Ursula Walther for her valuable contribution.

Additional Information

The information and opinions in this report were prepared by Deutsche Bank AG or one of its affiliates (collectively ‘Deutsche Bank’). Though the information herein is believed to be reliable and has been obtained from public sources believed to be reliable, Deutsche Bank makes no representation as to its accuracy or completeness. Hyperlinks to third-party websites in this report are provided for reader convenience only. Deutsche Bank neither endorses the content nor is responsible for the accuracy or security controls of those websites.

If you use the services of Deutsche Bank in connection with a purchase or sale of a security that is discussed in this report, or is included or discussed in another communication (oral or written) from a Deutsche Bank analyst, Deutsche Bank may act as principal for its own account or as agent for another person.

Deutsche Bank may consider this report in deciding to trade as principal. It may also engage in transactions, for its own account or with customers, in a manner inconsistent with the views taken in this research report. Others within Deutsche Bank, including strategists, sales staff and other analysts, may take views that are inconsistent with those taken in this research report. Deutsche Bank issues a variety of research products, including fundamental analysis, equity-linked analysis, quantitative analysis and trade ideas. Recommendations contained in one type of communication may differ from recommendations contained in others, whether as a result of differing time horizons, methodologies, perspectives or otherwise. Deutsche Bank and/or its affiliates may also be holding debt or equity securities of the issuers it writes on. Analysts are paid in part based on the profitability of Deutsche Bank AG and its affiliates, which includes investment banking, trading and principal trading revenues.

Opinions, estimates and projections constitute the current judgment of the author as of the date of this report. They do not necessarily reflect the opinions of Deutsche Bank and are subject to change without notice. Deutsche Bank provides liquidity for buyers and sellers of securities issued by the companies it covers. Deutsche Bank research analysts sometimes have shorter-term trade ideas that may be inconsistent with Deutsche Bank’s existing longer-term ratings. Some trade ideas for equities are listed as Catalyst Calls on the Research Website (https://research.db.com/Research/), and can be found on the general coverage list and also on the covered company’s page. A Catalyst Call represents a high-conviction belief by an analyst that a stock will outperform or underperform the market and/or a specified sector over a time frame of no less than two weeks and no more than three months. In addition to Catalyst Calls, analysts may occasionally discuss with our clients, and with Deutsche Bank salespersoners and traders, trading strategies or ideas that reference catalysts or events that may have a near-term or medium-term impact on the market price of the securities discussed in this report, which impact may be directionally counter to the analysts’ current 12-month view of total return or investment return as described herein. Deutsche Bank has no obligation to update, modify or amend this report or to otherwise notify a recipient thereof if an opinion, forecast or estimate changes or becomes inaccurate. Coverage and the frequency of changes in market conditions and in both general and company-specific economic prospects make it difficult to update research at defined intervals. Updates are at the sole discretion of the coverage analyst or of the Research Department Management, and the majority of reports are published at irregular intervals. This report is provided for informational purposes only and does not take into account the particular investment objectives, financial situations, or needs of individual clients. It is not an offer or a solicitation of an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Target prices are inherently imprecise and a product of the analyst’s judgment. The financial instruments discussed in this report may not be suitable for all investors, and investors must make their own informed investment decisions. Prices and availability of financial instruments are subject to change without notice, and investment transactions can lead to losses as a result of price fluctuations and other factors. If a financial instrument is denominated in a currency other than an investor’s currency, a change in exchange rates may adversely affect the investment. Past performance is not necessarily indicative of future results. Performance calculations exclude transaction costs, unless otherwise indicated. Unless otherwise indicated, prices are current as of the end of the previous trading session and are sourced from local exchanges via Reuters, Bloomberg and other vendors. Data is also sourced from Deutsche Bank, subject companies, and other parties.

The Deutsche Bank Research Department is independent of other business divisions of the Bank. Details regarding our organizational arrangements and information barriers we have to prevent and avoid conflicts of interest with respect to our research are available on our website (https://research.db.com/Research/) under Disclaimer.

Macroeconomic fluctuations often account for most of the risks associated with exposures to instruments that promise to pay fixed or variable interest rates. For an investor who is long fixed-rate instruments (thus receiving these cash flows), increases in interest rates naturally lift the discount factors applied to the expected cash flows and thus cause a loss. The longer the maturity of a certain cash flow and the higher the move in the discount factor, the higher will be the loss. Upside surprises in inflation, fiscal funding needs, and FX depreciation rates are among the most common adverse macroeconomic shocks to receivers. But counterparty exposure, issuer creditworthiness, client segmentation, regulation (including changes in assets holding limits for different types of investors), changes in tax policies, currency convertibility (which may constrain currency conversion, repatriation of profits and/or liquidation of positions), and settlement issues related to local clearing houses are also important risk factors. The sensitivity of fixed-income instruments to macroeconomic shocks may be mitigated by indexing the contracted cash flows to inflation, to FX depreciation, or to specified interest rates – these are common in emerging markets. The index fixings may – by construction – lag or mis-measure the actual move in the underlying variables they are intended to track. The choice of the proper fixing (or metric) is particularly important in swaps markets, where floating coupon rates (i.e., coupons indexed to a typically short-dated interest rate reference index) are exchanged for fixed coupons. Funding in a currency that differs from the currency in which coupons are denominated carries FX risk. Options on swaps (swaptions) the risks typical to options in addition to the risks related to rates movements.

Derivative transactions involve numerous risks including market, counterparty default and illiquidity risk. The appropriateness...
of these products for use by investors depends on the investors’ own circumstances, including their tax position, their regulatory environment and the nature of their other assets and liabilities; as such, investors should take expert legal and financial advice before entering into any transaction similar to or inspired by the contents of this publication. The risk of loss in futures trading and options, foreign or domestic, can be substantial. As a result of the high degree of leverage obtainable in futures and options trading, losses may be incurred that are greater than the amount of funds initially deposited – up to theoretically unlimited losses. Trading in options involves risk and is not suitable for all investors. Prior to buying or selling an option, investors must review the ‘Characteristics and Risks of Standardized Options’, at http://www.optionsclearing.com/about/publications/character-risks.jsp. If you are unable to access the website, please contact your Deutsche Bank representative for a copy of this important document.

Participants in foreign exchange transactions may incur risks arising from several factors, including the following: (i) exchange rates can be volatile and are subject to large fluctuations; (ii) the value of currencies may be affected by numerous market factors, including world and national economic, political and regulatory events, events in equity and debt markets and changes in interest rates; and (iii) currencies may be subject to devaluation or government-imposed exchange controls, which could affect the value of the currency. Investors in securities such as ADRs, whose values are affected by the currency of an underlying security, effectively assume currency risk.

Unless governing law provides otherwise, all transactions should be executed through the Deutsche Bank entity in the investor’s home jurisdiction. Aside from within this report, important conflict disclosures can also be found at https://research.db.com/Research/ on each company’s research page. Investors are strongly encouraged to review this information before investing.

Deutsche Bank (which includes Deutsche Bank AG, its branches and affiliated companies) is not acting as a financial adviser, consultant or fiduciary to you or any of your agents (collectively, “You” or “Your”) with respect to any information provided in this report. Deutsche Bank does not provide investment, legal, tax or accounting advice. Deutsche Bank is not acting as your impartial adviser, and does not express any opinion or recommendation whatsoever as to any strategies, products or any other information presented in the materials. Information contained herein is being provided solely on the basis that the recipient will make an independent assessment of the merits of any investment decision, and it does not constitute a recommendation of, or express an opinion on, any product or service or any trading strategy.

The information presented is general in nature and is not directed to retirement accounts or any specific person or account type, and is therefore provided to You on the express basis that it is not advice, and You may not rely upon it in making Your decision. The information we provide is being directed only to persons we believe to be financially sophisticated, who are capable of evaluating investment risks independently, both in general and with regard to particular transactions and investment strategies, and who understand that Deutsche Bank has financial interests in the offering of its products and services. If this is not the case, or if You are an IRA or other retail investor receiving this directly from us, we ask that you inform us immediately.

In July 2018, Deutsche Bank revised its rating system for short term ideas whereby the branding has been changed to Catalyst Calls (“CC”) from SOLAR ideas; the rating categories for Catalyst Calls originated in the Americas region have been consistent with the categories used by Analysts globally; and the effective time period for CCs has been reduced from a maximum of 180 days to 90 days.

Australia and New Zealand: This research is intended only for ‘wholesale clients’ within the meaning of the Australian Corporations Act and New Zealand Financial Advisors Act, respectively. Please refer to Australia-specific research disclosures and related information at https://australia.db.com/australia/content/research-information.html Where research refers to any particular financial product recipients of the research should consider any product disclosure statement, prospectus or other applicable disclosure document before making any decision about whether to acquire the product. In preparing this report, the primary analyst or an individual who assisted in the preparation of this report has likely been in contact with the company that is the subject of this research for confirmation/clarification of data, facts, statements, permission to use company-sourced material in the report, and/or site-visit attendance. Without prior approval from Research Management, analysts may not
accept from current or potential Banking clients the costs of travel, accommodations, or other expenses incurred by analysts attending site visits, conferences, social events, and the like. Similarly, without prior approval from Research Management and Anti-Bribery and Corruption (“ABC”) team, analysts may not accept perks or other items of value for their personal use from issuers they cover.

Additional information relative to securities, other financial products or issuers discussed in this report is available upon request. This report may not be reproduced, distributed or published without Deutsche Bank’s prior written consent.

Backtested, hypothetical or simulated performance results have inherent limitations. Unlike an actual performance record based on trading actual client portfolios, simulated results are achieved by means of the retroactive application of a backtested model itself designed with the benefit of hindsight. Taking into account historical events the backtesting of performance also differs from actual account performance because an actual investment strategy may be adjusted any time, for any reason, including a response to material, economic or market factors. The backtested performance includes hypothetical results that do not reflect the reinvestment of dividends and other earnings or the deduction of advisory fees, brokerage or other commissions, and any other expenses that a client would have paid or actually paid. No representation is made that any trading strategy or account will or is likely to achieve profits or losses similar to those shown. Alternative modeling techniques or assumptions might produce significantly different results and prove to be more appropriate. Past hypothetical backtest results are neither an indicator nor guarantee of future returns. Actual results will vary, perhaps materially, from the analysis.

The method for computing individual E,S,G and composite ESG scores set forth herein is a novel method developed by the Research department within Deutsche Bank AG, computed using a systematic approach without human intervention. Different data providers, market sectors and geographies approach ESG analysis and incorporate the findings in a variety of ways. As such, the ESG scores referred to herein may differ from equivalent ratings developed and implemented by other ESG data providers in the market and may also differ from equivalent ratings developed and implemented by other divisions within the Deutsche Bank Group. Such ESG scores also differ from other ratings and rankings that have historically been applied in research reports published by Deutsche Bank AG. Further, such ESG scores do not represent a formal or official view of Deutsche Bank AG.

It should be noted that the decision to incorporate ESG factors into any investment strategy may inhibit the ability to participate in certain investment opportunities that otherwise would be consistent with your investment objective and other principal investment strategies. The returns on a portfolio consisting primarily of sustainable investments may be lower or higher than portfolios where ESG factors, exclusions, or other sustainability issues are not considered, and the investment opportunities available to such portfolios may differ. Companies may not necessarily meet high performance standards on all aspects of ESG or sustainable investing issues; there is also no guarantee that any company will meet expectations in connection with corporate responsibility, sustainability, and/or impact performance.
